

Summary of Medical Cannabis Data Management System (MCDMS) Enhancements Deployed March 20, 2023

MCDMS Enhancement	For Practitioners	For Patients and Caregivers	For Registered Organizations
The process to correct or edit a certification has been streamlined.	<p>If incorrect information has been entered into a certification, practitioners have the ability to edit or correct the certification</p> <p>DOB/Capable flag are not editable fields. Certifications will need to be canceled & re-issued with the correct information.</p>	<p>If you notice incorrect information on your certification, please contact your practitioner to correct the certification.</p> <p>If your name or address changes, contact your practitioner to make updates to the certification.</p>	<p>Registered Organizations, if you notice incorrect information on a patient certification, please advise the patient to contact their practitioner for corrections.</p>
Practitioners have the ability to extend certifications vs. re-certifying patients.	<p>Practitioners now have the option to “Extend” active certifications issued by them. When extending a patient with a PC1 or PC2 number, the certification number will change to a PC3 number and contain a registry ID. A new copy must be provided to the patient.</p>	<p>Patients who receive an extension on their active certification with a PC3 number will be auto-registered at the time of certification.</p>	<p>Registered Organizations may advise patients to contact their certifying practitioner to extend a certification when it is about to expire.</p>
New certification numbers will now begin with PC3.	<p>Certifications issued after March 20, 2023, will contain a certification number beginning with PC3.</p> <p>Previous PC1/PC2 numbers will continue to be valid until they are extended by the certifying practitioner, or they expire.</p>	<p>Patients certified on or after March 20, 2023, will receive a certification number beginning with PC3.</p> <p>Active certifications beginning with PC1/PC2 are still valid.</p> <p>Patients who have an active PC1/PC2 certification, but have not registered in the old system, can still do so. They do not need to obtain a new certification.</p>	<p>Patients may present valid certifications with certification numbers beginning with PC1, PC2 and PC3.</p> <p>Patients with a PC1 or PC2 registration will need a registry ID card until their certification is updated by the practitioner.</p>
